Framing & Reminder: This document tries to establish the lexicon in Monolith. This is not a marketing document: this is a technical document framing how we reference our products and services.

What is an app "lexicon"? It's essentially all the base actions (=verbs) + references (= nouns) necessary to understand most of the app scope. So for us, we're talking about **3 base concepts, 6 recurring verbs, and 4 occasional verbs** --- all listed and defined below.

3 BASE REFERENCES (+5 sub references + 2 "dependencies")

*These concepts are infused all through our experience: our users **need** a basic understanding of this to figure out what they are doing. The naming should be as simple and obvious as possible.*

1. **Ethereum:** (how to define it for our users?)
   a. **Living your life on Ethereum**: Harnessing the power of the Ethereum network to live bankless, with unrestricted financial autonomy.
2. **Monolith Account**: The Monolith Account is where our users' store and manage their assets. It's the base concept including all the following:
   a. **The Monolith Contract Wallet**: The Monolith Contract Wallet notarizes our users' relationship with their assets on the Ethereum network.
      i. **Owner Address:** The address governing your **Monolith contract wallet**
         1. **Seed Phrase:** A unique 12-word seed phrase allowing access to your **Owner Address**
   b. **The Monolith (Visa Debit) Card:** To spend **your tokens** anywhere a Visa card is accepted (45M+ merchants).
   c. **The Monolith App:** To manage your **Monolith Account**
   d. **Your Tokens**: ETH & ERC20 tokens stored in the **Monolith Account**
   e. **(The Monolith Core):** a simulacrum referring to the whole set of backend services necessary for the **Monolith Account** to function.
3. **(soon to be deprecated) Gas Tank**: The ETH balance of the **Owner Address** of your **Monolith Contract Wallet**

6 RECURING VERBS = CORE (DAILY) ACTIONS (-> Monolith App)

(⚠ "Tokens" here is not the same "tokens" as in "your tokens" 🖑)
1. **Receive**: Receive ETH or ERC-20 tokens in your **Monolith Account**
2. **Send**: Send **your tokens** to another Ethereum address.
3. **Top-up** (your card): Sell **your tokens** for a fiat balance (GBP/EUR) ready to be spent on your **Monolith Card**.
4. **Swap**: Exchange one of **your tokens** for another through the interface provided in your **Monolith Account.**
5. **Fill (**your **Gas Tank**): Move an ETH balance from your **Monolith Contract Wallet** to your **gas tank**

6. **Buy:** Purchase **tokens** delivered in your **Monolith Account** (using a debit card or SEPA)

& 4 OCCASIONAL VERBS (= one time, or rarely)

1. **Deploy**: Initiate your **Monolith Contract wallet**.
2. **Back-up**: Properly securing your **Seed Phrase,** so that you can **restore** access to your **Monolith Contract Wallet** at any time.
3. **Restore**: Recovering access to your **Monolith Contract Wallet** by importing your **Seed Phrase**, using the **Monolith App.**
4. **Migrate**: Seamlessly upgrading your **contract wallet** to access new features.
